- In this year's survey, we ask respondents to tell us how they are doing financially, and then we ask them to briefly explain why they selected that answer:

- In this year's survey, we ask respondents to tell us how they are doing financially, and then we ask them to briefly explain why they selected that answer:

General Well-Being Section

Base: All respondents

[S]

B2. Overall, which one of the following best describes how well you are managing financially these days:

4. Living comfortably
3. Doing okay
2. Just getting by
1. Finding it difficult to get by

Base: B2 ne Refused

[Textbox, 500 characters]

[O]

B2a. In a sentence or two, please describe why you are [IF B2=1 SHOW: living comfortably / IF B2=2 SHOW:doing okay / IF B2=3 SHOW:just getting by / IF B2=4 SHOW:finding it difficult to get by]?

[Textbox, 500 characters]

Random Forest

- The idea behind a random forest is to average multiple decision trees to build a more robust model that is less susceptible to overfitting

Random Forest

Asking
Consumers
about their
Finances

Kimberly
Kreiss, Mike
Zabek

Motivation
and Overview

Data and
Sample

Methods

References

Appendix

- 1 "Draw a random bootstrap sample of size n
- 2 Grow a decision tree from the bootstrap sample. At each node:
 - 1 Randomly select d features without replacement
 - 2 Split the node using the feature that provides the best split according to the objective function, ie, maximizing information gain
- 3 Repeat the steps 1-2 k times." (Mirjalili, Raschka, 2017)

Random Forest: feature importance

Asking
Consumers
about their
Finances

Kimberly
Kreiss, Mike
Zabek

Motivation
and Overview

Data and
Sample

Methods

References

Appendix

- For each tree, gives a weighted calculation for how much each split decreases the impurity
- Averaged across all the trees
- Features with this highest value are the “most important”

Logistic Regression

Asking
Consumers
about their
Finances

Kimberly
Kreiss, Mike
Zabek

Motivation
and Overview

Data and
Sample

Methods

References

Appendix

- Used for prediction when the outcome variable is binary
- Used to estimate the probability that a particular outcome will occur

l1 penalty (Lasso)

Asking
Consumers
about their
Finances

Kimberly
Kreiss, Mike
Zabek

Motivation
and Overview

Data and
Sample

Methods

References

Appendix

- Imposes a penalty that will lead to zero coefficients for some variables
- Generally features not shrunk towards zero can be interpreted as the more important features

Interpretation of coefficients

Asking
Consumers
about their
Finances

Kimberly
Kreiss, Mike
Zabek

Motivation
and Overview

Data and
Sample

Methods

References

Appendix

- Can be generally hard to interpret
- “Expected change in the log odds of not doing okay”
- Think about in terms of signs and magnitude in relation to each other:
 - Positive coefficient with higher magnitude means that the presence of that phrase is associated with a higher probability of not doing okay

Preprocessing of Data

Results: disability

Asking
Consumers
about their
Finances

Kimberly
Kreiss, Mike
Zabek

Motivation
and Overview

Data and
Sample

Methods

References

Appendix

- Mentioning disability is extremely predictive of poor financial wellbeing (although there is a low incidence overall)
 - Being on disability and not having enough to live on
 - Complex relationships between work and disability

Results: health

Asking
Consumers
about their
Finances

Kimberly
Kreiss, Mike
Zabek

Motivation
and Overview

Data and
Sample

Methods

References

Appendix

- There seems to be a relationship between health and financial wellbeing
 - People talk about not being able to pay medical bills
 - On the other hand, many mention “good health” as an important reason for their financial wellbeing (can refer to both good health or good health insurance)

Results: debt

Asking
Consumers
about their
Finances

Kimberly
Kreiss, Mike
Zabek

Motivation
and Overview

Data and
Sample

Methods

References

Appendix

- People value not having any debt
- People seem to have aversions to certain types of debt more than others: people mention high credit card debt for as an important factor for poor financial wellbeing or not using credit cards as a sign of good financial wellbeing

Issues and next step

Asking
Consumers
about their
Finances

Kimberly
Kreiss, Mike
Zabek

Motivation
and Overview

Data and
Sample

Methods

References

Appendix

- Does not currently incorporate weights—not nationally representative
- How frequent are each of these across responses? Across categories?
 - Likely picking up words that are very common in one category and not the other (there is still value in that)
- Other models or techniques?
- Deeper dives on these topics

Conclusions

Asking
Consumers
about their
Finances

Kimberly
Kreiss, Mike
Zabek

Motivation
and Overview

Data and
Sample

Methods

References

Appendix

- One of many ways to analyze text data
- Most techniques won't completely automate analysis for us, but can give us some information about how to think about our responses.
- Our results suggest some factors that are important for determining financial wellbeing:
 - disability/health
 - debt
 - income
 - work

Appendix

- Don't work all that well here:
 - Responses tend to be pretty short, makes it hard for the model to work
- Code/visuals from this soon to be on github page
